About us

Company

Inci Dental was founded 1994 in Istanbul. Since then the company produce a variety of consumable materials. Since 1994, the concept of quality is established, always giving priority to customer satisfaction, the production process by making significant investments in R & D activities, cooperate with universities and Scientific and Technological Research Council of Turkey, made production as newest and unique products, in the sector so has achieved a leading place.

The company is only producer of variety materials in Türkiye. Inci Dental is manufacturer of Dental amalgam filling material, dental composites filling material, endodontic rotary files, fiber posts, polishing discs, articulating paper, acrylic teeth and etc. We export our products more than 80 countries in the World.

Our quality assurance approve by European Union with the certificates of ISO 9001, ISO 13485 and the EC.

Vision

To be a company which is the first choice of domestic and foreign business partners.

In this context, the sale of the products that we have done all, are the first brands that come to mind of the dentists.

Mission

Inci dental, in dental sector;

Who makes the difference

Who find, research and use the right technologies in all over the world

Who adapt quickly to technological developments

Who produce best quality

Who lead the innovation

A company which holds the highest level of employee, domestic and foreign business partners satisfaction.

ENDOART®
FINAL TOUCH

**Heat Treated Control Memory
Rotary Files**

Action Gold Rotary Files are precision-engineered nickel-titanium instruments tailored for advanced endodontic shaping. Unique gold heat-treated technology, these files offer exceptional flexibility and superior resistance to cyclic fatigue. Their innovative design ensures efficient canal preparation while reducing the risk of iatrogenic damage, making them an excellent choice for reliable and safe endodontic procedures.

Action Blue Rotary Files are state-of-the-art nickel-titanium instruments designed to simplify and enhance endodontic shaping. With advanced blue heat treatment, these files deliver outstanding flexibility and durability, allowing smooth navigation through intricate canal systems while minimizing the risk of file separation. Their cutting-edge design ensures efficient debris removal and optimal shaping for superior clinical outcomes.

Action Gold Rotary Files

Smart Gold Rotary Files are %4 taper advanced nickel-titanium instruments designed for precision and efficiency in endodontic treatments. Featuring cutting-edge gold heat treatment, these files provide an optimal balance of flexibility and strength, ensuring seamless navigation through intricate canal anatomies. With enhanced cutting efficiency and exceptional resistance to fatigue, Smart Gold Rotary Files deliver consistent and predictable results for every procedure.

Smart Blue Rotary Files are high-performance %4 taper nickel-titanium instruments designed to meet the demands of modern endodontic procedures. With advanced blue heat treatment, these files provide exceptional flexibility and fracture resistance, ensuring smooth navigation through complex canal systems. Their optimized cutting design enhances efficiency and precision, delivering reliable and consistent results for every treatment.

Touch Gold Rotary Files are premium %6 taper nickel-titanium instruments designed for exceptional performance in endodontic treatments. Utilizing advanced gold heat treatment technology, these files offer unmatched flexibility, strength, and fatigue resistance. Their innovative cutting design ensures smooth navigation through intricate canal systems while minimizing the risk of file separation, making them ideal for precise and efficient endodontic procedures.

Touch Blue Rotary Files are cutting-edge %6 taper nickel-titanium instruments designed to provide superior precision and efficiency in endodontic treatments. Featuring advanced blue heat treatment, these files offer exceptional flexibility, durability, and resistance to fatigue, ensuring smooth navigation through even the most challenging canal anatomies. Their innovative design promotes effective debris removal and accurate shaping for optimal clinical outcomes.

EXPERT

EndoArt Expert Gold Reciprocation Files are designed for efficient single-file root canal treatments with a reciprocating motion. These files feature alternative tapers (%6 and %4 angles) ideal for single-file systems, allowing preparation at a standard angle along the canal. Compatible with endomotors capable of reciprocating movement, Expert Gold files offer a rotation angle adjustment of 150° left and 30° right. The advanced heat treatment technology provides superior flexibility and durability, making Expert Gold files more resistant to fracture and offering higher sharpness compared to standard Ni-Ti files.

EndoArt Expert Blue Reciprocation Files are designed for single-file root canal treatments with a reciprocating motion. These files offer alternative tapers (%6 and %4 angles) ideal for single-file systems, allowing preparation at a standard angle along the canal. Expert Blue files are compatible with endomotors capable of reciprocating movement, featuring a rotation angle adjustment of 150° left and 30° right. With advanced heat treatment technology, these files provide exceptional flexibility, durability, and resistance to fracture, surpassing standard Ni-Ti files in both sharpness and endurance.

RETREATMENT

Control Memory
Heat Treated Wire
Convex Triangle
Cross - Section

EndoArt Retreatment Rotary Files are specifically developed for repeated root canal treatments. With high cutting efficiency, these files are designed for the effective removal of canal filling materials. The system consists of three instruments: D1, D2, and D3, each tailored for cleaning different sections of the canal—coronal (D1), middle (D2), and apical (D3). D1 features an active cutting tip for initial entry into the canal, while the subsequent instruments maintain a non-cutting tip for precise debris removal.

EndoArt K Files

EndoArt K Files are high-quality stainless steel hand files designed for precise and effective canal shaping. These files are ideal for traditional manual endodontic procedures, offering excellent control and durability. The tapered design ensures efficient debris removal while maintaining safety during canal preparation.

Codes: 06 08 10 15 20 25 30 35 40 45
50 55 60 70 80 90 100 110 120 130 140

6 pieces in a box

EndoArt H Files

EndoArt H Files are premium stainless steel hand files designed for precise and reliable canal preparation. These files offer excellent flexibility and durability, making them ideal for thorough manual shaping of the canal. Their structured design ensures effective debris removal and smooth navigation through varying canal anatomies.

Codes: 06 08 10 15 20 25 30 35 40 45
50 55 60 70 80 90 100 110 120 130 140

EndoArt Irrigation Tips

EndoArt Irrigation Tips are plastic tips designed for effective irrigation during root canal treatment. These tips help provide thorough cleaning and disinfection of the root canal system thanks to their double side vent design, which facilitates the removal of debris and the smear layer. The conical shape ensures proper adaptation to the root canal anatomy, enhancing the overall

Properties

- 30G – 0.3 mm Tip: Ensures precise and effective irrigation.
- Can be Autoclavable: Allows for sterilization, maintaining high standards of hygiene.
- Made by Special Polypropylene Material: Ensures durability and reliability during use.

Packaging

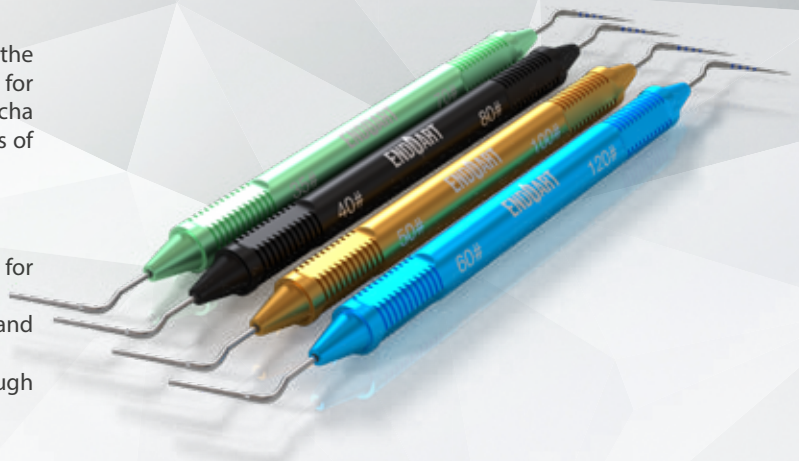

20 pcs in a box : Convenient packaging for easy and efficient use during multiple procedures.

EndoArt Plugger

EndoArt Plugger is a specialized hand instrument used to push the gutta percha during root canal treatment. This tool is essential for ensuring the proper placement and condensation of gutta percha within the root canal system, enhancing the overall effectiveness of the treatment.

Properties

- Stainless Steel on One Side: Provides durability and strength for effective gutta percha placement.
- Nickel Titanium Material on the Other Side: Offers flexibility and adaptability to the root canal's anatomy.
- Autoclavable: Ensures high standards of hygiene and safety through sterilization.
- Color-Coded for Different Sizes:
- Green: Nickel Titanium #35 - Stainless Steel #70
- Black: Nickel Titanium #40 - Stainless Steel #80
- Yellow: Nickel Titanium #50 - Stainless Steel #100
- Blue: Nickel Titanium #60 - Stainless Steel #120

MANUFACTURING**

EndoArt Gutta Percha Points

EndoArt Gutta Percha Points are a high-quality root canal filling material designed for easy and efficient fillings. These points offer variable taper and sizes to meet the diverse needs of dental professionals. Their properties ensure excellent performance and precise results in endodontic procedures.

Properties

- Variable Taper Options: Available in 02, 04, and 06 taper options to suit different clinical requirements.
- Excellent Radiopacity: Ensures clear visibility under radiographic examination.
- Length Marked: Facilitates accurate placement and reduces the risk of overfilling.
- Hand Rolled: Ensures consistent quality and reliability.

EndoArt Paper Points

EndoArt Paper Points are absorbent paper points specifically designed to dry root canals effectively. These points offer a variety of sizes and tapers to meet the diverse needs of dental professionals. Their properties ensure excellent absorbency, sterility, and precise results in endodontic procedures.

Properties

- Highly Absorbent: Ensures efficient drying of root canals.
- Sterile Packaging: Maintains high standards of hygiene and safety.
- Variety of Sizes and Tapers: Available in different sizes and tapers to suit various clinical requirements.
- Length Marked: Facilitates accurate placement.
- Hand Rolled: Ensures consistent quality and reliability.

CE

EndoArt Endomotor Pro

EndoArt Endomotor Pro is a cordless endomotor with an integrated apex locator function, designed by Woodpecker. This advanced endodontic device ensures precise and efficient root canal treatments, making it an essential tool for dental professionals.

Properties

- Ready Program Settings: Optimized for different file systems to enhance efficiency and performance.
- Rotation Modes: Offers three rotation modes – Clockwise, Anti-Clockwise, and Reciprocating.
- Speed Range: Minimum 50 Rpm and Maximum 1800 Rpm, with a torque up to 5.0 N.Cm.
- Micro USB Charging: Ensures convenience and ease of charging.
- 6:1 Contra Angle: Provides optimal control and precision.
- Auto Start in Root Canal: Automatically starts the motor when inserted into the root canal.
- Auto Reverse: Prevents file binding by reversing the rotation direction when necessary.
- Brushless Motor: Ensures durability and high performance.
- 360° Rotate Centre Angle: Offers complete flexibility and control.

**SPECIALTY
MANUFACTURING**

EndoArt Endomotor

EndoArt Endomotor is a brushless endomotor with an integrated apex locator function, designed by Sani.

Properties

- Ready 10 Program Settings: Optimized for different file systems to enhance efficiency and performance.
- Rotation Modes: Offers three rotation modes – Clockwise, Anti-Clockwise, and Reciprocating.
- Speed Range: Minimum 50 Rpm and Maximum 1800 Rpm, with a torque up to 5.0 N.Cm.
- Micro USB Charging: Ensures convenience and ease of charging.
- 1:1 Contra Angle: Provides optimal control and precision.
- Auto Start in Root Canal: Automatically starts the motor when inserted into the root canal.
- Auto Reverse: Prevents file binding by reversing the rotation direction when necessary.
- Brushless Motor: Ensures durability and high performance.

EndoArt Bioceramic Sealer

EndoArt Bioceramic Sealer is a highly biocompatible premixed injectable calcium aluminosilicate paste designed for root canal filling and sealing. This advanced sealer ensures optimal performance with high pH and bioactive properties that support remineralization through hydroxy-apatite formation.

Properties

- Resin-Free: Ensures biocompatibility and safety.
- High pH: Promotes antibacterial activity and healing.
- No Shrinkage: Maintains stability and integrity of the seal.
- Radiopaque: Provides clear visibility during radiographic evaluations.
- Highly Flowable: Ensures smooth application and excellent adaptation to canal walls. Non toxic
- Non-Toxic: Safe for use in dental procedures.
- Good Setting Time: Provides reliable and efficient sealing without the need for mixing.

Packaging

1g in a syringe x 2

EndoArt Bioceramic Sealer Powder&Liquid

EndoArt Bioceramic Sealer is a bioceramic root canal sealer available in powder and liquid form for permanent root canal treatments. Its high pH and bioactive properties aid in remineralization through hydroxy-apatite formation, making it a reliable choice for dental professionals.

Properties

- Resin Free: Ensures biocompatibility and safety.
- No Shrinkage: Maintains stability and integrity of the seal.
- High Purity: Guarantees superior quality and performance.
- Highly Biocompatible: Safe for use in dental treatments.
- No Moisture Required: Facilitates ease of use.
- Great Handling: Provides smooth and efficient application.

Packaging

5g Powder and 5 ml Liquid

EndoArt MTA Powder&Liquid

MTA (Mineral Trioxide Aggregate) is tricalcium silicate-based root canal repair material. Biocompatible and fine grain powder allows you to make easy and successful treatment. It can be used for root canal perforation, apical plug during apexification, pulp capping, pulpotomy and root canal filling material.

Properties

- Excellent Handling Properties
- High pH
- Promotes mineralization of tissue
- Radiopaque
- No discolouration

Packaging

0,14 g MTA powder - 5 ml Liquid
 0,14 g MTA powder x 7 - 5 ml Liquid
 1 g MTA Powder – 5 ml Liquid

EndoArt Root Canal Sealer

EndoArt Root Canal Sealer is a radiopaque zinc oxide-based sealer and filling material designed for permanent root canal treatments. This sealer ensures excellent marginal sealing and antibacterial properties, making it an effective solution for root canal procedures.

Properties

- Easy Mixing: Facilitates quick and efficient preparation.
- Antibacterial Effect: Helps in preventing infections.
- Perfect Marginal Sealing: Ensures a secure and long-lasting seal.
- Used with Gutta Percha Points: Compatible with gutta percha for optimal results.

Packaging

15g Powder and 10 ml Liquid

EndoArt Fiber Post

EndoArt Fiber Post is a universal resin glass fiber post system designed for esthetic and metal-free dental restorations. The system includes fiber posts with different diameters (1.00 mm, 1.2 mm, 1.4 mm, 1.6 mm, and 1.8 mm), each color-coded for easy identification and usage.

Properties

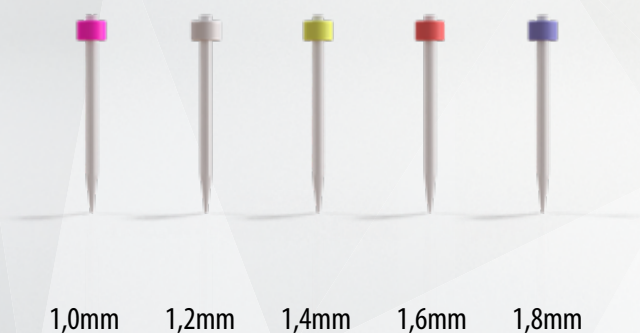

- Radiopaque: Ensures visibility under radiographic examination.
- Conical Tip: Provides excellent fit and adaptation to the root canal.
- High Resistance: Offers durability and long-lasting performance.
- Color-Coded: Simplifies the selection and identification of the correct post size.
- Compatible with Adhesive Resin Cements: Ensures reliable bonding and stability.

Packaging

EndoArt Fiber Post Kit: Contains 5 posts each of 1.2 mm, 1.4 mm, 1.6 mm, and 1.8 mm diameters, along with 4 assorted drills.

Refills: Available for individual sizes:

- 5 pcs. 1 mm posts
- 5 pcs. 1.2 mm posts
- 5 pcs. 1.4 mm posts
- 5 pcs. 1.6 mm posts
- 5 pcs. 1.8 mm posts

RubyCal Calcium Hydroxide Paste With Barium Sulphate

RubyCal Calcium Hydroxide Paste With Barium Sulphate is a high-quality, non-setting calcium hydroxide premixed paste designed for root canal therapy and vital pulp therapy.

Properties

- High Radiopacity: Ensures clear visibility under radiographic examination.
- Easy Removal: Facilitates smooth and efficient removal when necessary.
- High pH (>12): Provides antibacterial properties and promotes healing.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

RubyCal Calcium Hydroxide Powder & Liquid

RubyCal Calcium Hydroxide Powder & Liquid is a high-quality formulation designed for root canal therapy and vital pulp therapy. This product includes both calcium hydroxide powder and liquid, ensuring ease of application and excellent handling characteristics for dental professionals.

Properties

- Easy Removal: Facilitates smooth and efficient removal when necessary.
- High pH (>12): Provides antibacterial properties and promotes healing.

Packaging

10g powder and 10ml liquid

RubyCal Calcium Hydroxide Paste With Iodoform

RubyCal Calcium Hydroxide Paste With Iodoform is a high-quality, non-setting calcium hydroxide premixed paste designed for root canal therapy and vital pulp therapy.

Properties

- Radiopacity: Ensures clear visibility under radiographic examination.
- Promote Apexification: Facilitates the formation of a calcified barrier at the apex of the tooth.
- Disinfects Canal: Provides effective disinfection of the root canal.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

RubyCal Calcium Hydroxide Powder

Calcium hydroxide powder for root canal therapy.

Properties

- Promote Apexification: Facilitates the formation of a calcified barrier at the apex of the tooth.
- Disinfects Canal: Provides effective disinfection of the root canal.

Packaging

30g Powder

RubyEdta 17% EDTA Gel

RubyEdta 17% EDTA Gel is a root canal preparation gel designed for professional dental applications. This advanced formulation offers superior lubrication and cleaning efficiency, ensuring optimal performance during dental procedures. The gel is dispensed with precision application tips, enabling dentists to achieve the highest level of accuracy and ease.

Properties

- **Enhanced Cleaning:** Formulated with EDTA, it effectively removes smear layers and debris from the root canal, promoting a clean and sterile environment.
- **File Breakage Prevention:** The lubricating properties of the gel significantly reduce friction, thereby decreasing the risk of file breakage during use.

Packaging

3ml syringe
3ml syringe x 2
3ml syringe x 4

EndoArt Chlorex Gel

EndoArt Chlorex Gel is a powerful 2% chlorhexidine gel formulated specifically for root canal preparation. It combines superior antibacterial properties with easy application, enhancing the effectiveness and safety of endodontic procedures.

Properties

- **2% Chlorhexidine Digluconate:** Known for its potent antibacterial effects, it helps in eliminating bacteria and reducing the risk of infection during root canal treatment.
- **Enhanced Treatment Efficiency:** The gel simplifies root canal procedures by ensuring thorough cleaning and effective lubrication.

Packaging

2g Syringe

EndoArt EDTA Solution

EndoArt EDTA Solution is a highly effective irrigation solution designed for the preparation and thorough cleaning of root canals. This solution is available in two concentrations, 17% EDTA and 5% EDTA, to cater to different clinical needs. It plays a crucial role in removing the smear layer and enhancing the overall success of endodontic treatments.

Properties

- **Rapid Cleaning:** The solution quickly and effectively cleanses the root canals, ensuring all debris and smear layers are removed.
- **Neutral pH:** With a neutral pH, EndoArt EDTA Solution is gentle on dental tissues while maintaining its cleaning efficacy.

Packaging

250ml Liquid

EndoArt Chlorex

EndoArt Chlorex is a 2% chlorhexidine digluconate irrigation liquid designed for root canal treatment. This powerful solution enhances the mechanical preparation and cleaning of root canals, making it an essential tool for dental professionals.

Properties

- **2% Chlorhexidine Digluconate:** Known for its potent antibacterial properties, it helps eliminate bacteria and reduce the risk of infection during root canal procedures.
- **Enhanced Cleaning Efficiency:** The solution aids in the thorough removal of debris and smear layers, ensuring a clean and sterile environment in the root canal.
- **Supports Mechanical Preparation:** By improving the efficacy of mechanical preparation, EndoArt Chlorex contributes to more successful and efficient endodontic treatments.

Packaging

250ml Liquid

EndoArt Sodium Hypochlorite

EndoArt Sodium Hypochlorite is a 5.25% sodium hypochlorite irrigation liquid specifically formulated for root canal treatment. This powerful solution is essential for effective canal cleaning and ensuring a sterile environment.

Properties

- **Smear Layer Removal:** Efficiently removes the smear layer, promoting a clean and prepared root canal surface.
- **Effective Canal Cleaning:** The strong cleaning action helps in removing organic debris and necrotic tissue from the canal.

Packaging

250ml Liquid

EndoArt Citric Acid

EndoArt Citric Acid is a 40% citric acid irrigation liquid designed specifically for root canal treatment. This powerful solution aids in effectively removing the smear layer and cleaning the root canal system, ensuring a pristine environment for successful endodontic procedures.

Properties

- **40% Citric Acid:** Formulated with high-concentration citric acid to ensure thorough cleaning and smear layer removal.
- **Improved Mechanical Cleaning:** Supports the mechanical cleaning process, ensuring a more efficient and successful treatment outcome.

Packaging

250ml Liquid

Ruby Iodoform Powder

Ruby Iodoform Powder is pharmaceutical-grade iodoform powder specifically designed for effective root canal treatment. This versatile product is ideal for filling root canals after depulping, managing chronic periodontitis, and serving as a wound dressing in various dental procedures.

Properties

- **Pure Iodoform (Pharma Grade):** Ensures high quality and effectiveness in clinical applications.
- **High pH 12.5:** Provides an environment that inhibits bacterial growth and promotes healing.

Packaging

30g Powder

Ruby Gutta Solver

Ruby Gutta Solver is a specialized solution formulated for the efficient removal of gutta-percha materials during the re-treatment of root canals. This product harnesses the natural power of 100% orange oil, ensuring a non-toxic and environmentally friendly approach to endodontic procedures.

Properties

- **100% Orange Oil:** A natural and safe solvent derived from orange oil, known for its effectiveness in dissolving gutta-percha.
- **Non-Toxic and Natural:** Free from harmful chemicals, making it safe for both patients and dental professionals.

Packaging

10ml Liquid Bottle

END^QART[®]

RubyFill Nano Composite

RubyFill Nano Composite is a radiopaque, cost-effective nano hybrid composite system that can be applied in both anterior and posterior areas. This versatile composite combines advanced nano filler technology with superior handling properties, ensuring excellent aesthetics and high durability. Ideal for dental restorations, it offers a natural appearance and high resistance to abrasion.

Properties

- Universal Nano Composite: Suitable for various restorative applications due to its universal shade compatibility.
- Light Reflection Property: The nano fillers mimic the natural tooth structure, providing a life-like aesthetic.
- High Filler Rate: Ensures strength and durability for long-lasting restorations.
- Polishable to a High Degree: Can be polished to achieve a high gloss finish, enhancing the natural appearance of the restoration.
- Ease of Use: User-friendly application properties make it convenient for dental professionals.

Packaging

Refill: 4g syringe for easy and precise application.

Kit 1: Includes 4g syringe (6 pcs.), 5ml RubyBond (1 pcs.), 3ml RubyEtch (1 pcs.), and accessories for a comprehensive restorative solution.

Shade Options: A1, A2, A3, A3.5, B1, B2, C1, D3, OA2, Extra Bleach

RubyComp Nano Composite

RubyComp Nano Composite is a versatile, radiopaque nano hybrid composite system designed for both anterior and posterior dental restorations. This advanced composite combines superior aesthetic properties with high durability, making it ideal for various restorative applications. The nano fillers enhance the light reflection, providing a natural appearance that seamlessly blends with the surrounding tooth structure.

Properties

- Higher Aesthetic: Delivers excellent aesthetic results with natural-looking restorations.
- High Filler Rate: Contains a high percentage of filler particles, contributing to its strength and durability.
- Polishable to a High Degree: Can be polished to achieve a high gloss finish, enhancing the natural appearance of the restoration.
- Ease of Use: Features user-friendly handling properties, making application convenient for dental professionals.

Packaging

Refill: 4g syringe for precise and easy application.

Kit 1: Includes 4g syringe (6 pcs.), 5ml RubyBond (1 pc.), 3ml RubyEtch (1 pc.), and accessories, providing a comprehensive solution for restorative procedures.

Shade Options: A1, A2, A3, A3.5, B1, B2, C1, D3, OA2, Extra Bleach

RubyComp P Posterior Composite

RubyComp P Posterior Composite is a high-quality composite system specifically designed for posterior dental restorations. This advanced composite offers excellent handling properties, superior strength, and a natural appearance, making it ideal for use in the posterior field where durability and aesthetics are crucial.

Properties

- **High Intensity:** Offers excellent strength, making it suitable for restorations that need to withstand significant chewing forces.
- **Resistant to Chewing Force:** Designed to withstand the forces of chewing, ensuring the restoration remains intact over time.
- **No Discoloration Post-Polymerization:** Maintains its original color after polymerization, ensuring a natural and aesthetically pleasing appearance.

Packaging

Refill: 4g syringe for easy and precise application.

Kit 1: Includes 4g syringe (6 pcs.), 5ml RubyBond (1 pcs.), 3ml RubyEtch (1 pcs.), and accessories for a comprehensive restorative solution.

Shade Options: A1, A2, A3, A3.5, B1, B2, C1, D3, OA2, Extra Bleach

RubyFlow Flowable Composite

RubyFlow Flowable Composite is a light-curing, radiopaque composite designed for various dental restorations. Its flowable consistency ensures excellent handling and adaptability, making it ideal for small cavities, lining, and repairs. This versatile composite combines aesthetic appeal with superior mechanical properties to deliver exceptional results.

Properties

- **Low Shrinkage, Low Wear:** Minimizes polymerization shrinkage and ensures long-lasting restorations.
- **High Gloss Polishability:** Can be polished to a high gloss, enhancing the aesthetic appearance of restorations.
- **Very Good Marginal Adaptation:** Ensures tight and secure margins, reducing the risk of leakage and secondary caries.

Packaging

Refill: 2g in a syringe for precise and easy application.

Kit 1: 2g in a syringe x 2

Kit 2: 2g syringe x 4

Shade Options: A1, A2, A3, A3.5, B1, OA2

RubyFlow Bulk Fill

RubyFlow Bulk Fill is a high-performance flowable composite, ideal for dental professionals aiming to simplify and speed up the restoration process. This innovative material is designed specifically for bulk filling, allowing dental practitioners to fill cavities up to 4 mm in a single layer, reducing chair time and improving efficiency.

Properties

- **Bulk Filling up to 4 mm:** Enables efficient and effective single-layer filling of large cavities, enhancing workflow.
- **Low Polymerization Shrinkage:** Minimizes the risk of shrinkage, ensuring durable and long-lasting restorations.
- **High Mechanical Strength:** Offers robust resistance to wear and fractures, providing reliable performance.
- **Easy Handling:** Designed for smooth application, reducing procedure complexity and saving time.

Packaging

- 2g in a Syringe Color Variants: Shades include A1, A2, A3, A3.5

RubyCompomer

RubyCompomer is a light-curing compomer restorative material designed to provide high fluoride release. This versatile product ensures easy adaptation into the cavity, making it ideal for various dental restorations. It is particularly useful for the restorations of deciduous teeth, moderate class I and II, and anterior class III cavity fillings.

Properties

- High Fluoride Release: Continuously releases fluoride over a long period, aiding in the prevention of secondary caries.
- Easy and Reliable Adaptation: Ensures a snug fit and seamless integration into the cavity.
- Radiopaque: Easily visible on radiographs, aiding in diagnosis and treatment verification.
- Easy to Polish and Model: Can be easily polished to a high gloss finish and shaped to suit the restoration needs.
- Aesthetic Appearance: Offers a natural and aesthetically pleasing appearance with various color options to match different patient needs.

Packaging

4g in a Syringe
 Shade: A1, A2, A3, A3.5, B1, B2, Purple, Green, Blue, Pink, Orange, Red, Silver
 Kit 1: 0,25g x 20 pcs compule mixed shade pack
 Kit 2: 0,25g x 40 pcs compule mixed shade pack
 Kit 3: 0,25g x 20 pcs compule mixed shade pack + 1 piece RubySeBond + RubyCompomer Flow
 Kit 4: 0,25g x 40 pcs compule mixed shade pack + 1 piece RubySeBond + RubyCompomer Flow

RubyCompomer Flow

RubyCompomer Flow is a light-curing flowable compomer restorative material with high fluoride release. It is designed for easy and reliable adaptation to cavities, making it an ideal choice for the restorations of deciduous teeth, moderate class I and II cavities, and anterior class III cavity fillings.

Properties

- High Fluoride Release: Provides long-term fluoride release for added protection.
- Easy Adaptation: Ensures smooth and reliable adaptation to the cavity.
- Radiopaque: Facilitates clear visibility under radiographic examination.
- Easy Polishing and Modeling: Simplifies the finishing process for a smooth and aesthetic result.
- High Abrasion and Pressure Resistance: Ensures durability and longevity of the restoration.
- High Adhesion: Offers excellent bonding to dentin and enamel.
- Natural and Aesthetic Appearance: Available in different color options to match the natural tooth color.

Packaging

2g in a Syringe
 Shade: A1, A2, A3, A3.5, B1, B2, Purple, Green, Blue, Pink, Orange, Red, Silver

5th
Generation

RubyBond Adhesive System

RubyBond is a light-curing, single-component, 5th generation bonding agent designed for adhesive restorations. This universal adhesive system is compatible with all composites, making it a versatile and essential addition to any dental practice.

Properties

- High Bond Strength: Ensures a strong and durable bond between the restorative material and the tooth structure.
- Perfect Adhesion to Dentin and Enamel: Provides excellent adhesion, ensuring the longevity and stability of the restoration.
- 5th Generation: Utilizes advanced adhesive technology to deliver reliable and consistent results.

Packaging

5ml Bottle

MDP
monomer

7th
Generation

RubySEBond Self Etching Adhesive System

RubySEBond is a 7th generation self-etching, light-curing, one-component adhesive designed for adhesive restorations. This advanced adhesive system eliminates the need for extra etching with phosphoric acid, streamlining the bonding process and saving valuable time during dental procedures.

Properties

- MDP Monomer: Ensures strong and durable bonding to both enamel and dentin.
- No Extra Etching Required: Simplifies the bonding process by eliminating the need for additional etching steps.
- Long-Lasting Restorations: Provides reliable and durable restorations that withstand the test of time.
- Time-Saving: Efficient application process saves valuable time for dental professionals.
- 7th Generation Technology: Utilizes advanced adhesive technology to deliver optimal performance and consistent results.

RubyEtch Etching Gel

RubyEtch Etching Gel is a high-quality etching gel containing 37% phosphoric acid, designed for optimal surface etching in dental procedures. The gel's formulation ensures excellent handling and precision, making it an essential tool for dental professionals. The blue-colored gel ensuring accurate and effective etching.

Properties

- Easily Rinsed: The gel is easily rinsed away, leaving no residue and ensuring a clean surface for subsequent procedures.
- Blue Colored: The distinct blue color allows for easy identification and precise application, ensuring thorough etching of the desired areas.
- Optimum Surface Etching: Provides effective and consistent surface etching, enhancing the bond strength between the tooth surface and restorative materials.

Packaging

3ml Syringe.
3ml Syringe x 2
3ml Syringe x 4
50ml Syringe

RubyEtch HF Porcelain Etch

RubyEtch HF Porcelain Etch is a 9.5% buffered hydrofluoric acid gel specifically formulated to improve the mechanical bonding between porcelain and adhesive agents. This high-quality etching gel ensures optimal surface preparation, making it an essential tool for dental professionals performing porcelain restoration repairs.

Properties

- Porcelain Restoration Repair: Effectively prepares porcelain surfaces for adhesive bonding, enhancing the durability and longevity of restorations.
- Buffered Formula: The buffered formulation ensures controlled and precise etching, providing consistent and reliable results.
- Easily Rinsed: The gel is easily rinsed away, leaving no residue and ensuring a clean surface for subsequent procedures.

Packaging

3ml Syringe: Conveniently sized for easy and precise application.
Porcelain Repair Kit: Includes a 3ml syringe of RubyEtch HF Porcelain Etch and Silane.

RubyLiner with Glass Ionomer

RubyLiner with Glass Ionomer is a light-curing, glass ionomer-based cavity liner specifically designed to protect the pulp of the tooth. It offers excellent biocompatibility and provides reliable protection under direct and indirect restorations, including composites, amalgams, ceramics, and other metal restorations. This cavity liner combines advanced properties with ease of use, making it an essential tool for dental professionals.

Properties

- **Excellent Biocompatibility:** Ensures safety and compatibility with the natural tooth structure.
- **Fluoride Release:** Continuously releases fluoride, aiding in the prevention of secondary caries.
- **Radiopaque:** Easily visible on radiographs, aiding in diagnosis and treatment verification.
- **Excellent Handling Characteristics:** The formulation ensures easy and precise application.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

RubyCal LC Calcium Hydroxide

RubyCal LC Calcium Hydroxide is a light-curing material designed for pulp capping and lining under dental fillings. This advanced formulation provides effective protection for the pulp and ensures optimal conditions for healing and repair. Ideal for both direct and indirect pulp capping procedures, RubyCal LC combines ease of use with reliable performance.

Properties

- **Direct & Indirect Pulp Capping:** Provides versatile application options for different clinical scenarios.
- **Light Curing:** Ensures quick and efficient setting by light.
- **Single Component:** Simplifies the application process, making it convenient and user-friendly.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

RubyCal Calcium Hydroxide Liner

RubyCal Calcium Hydroxide Liner is a two-component, self-curing lining material specifically formulated for pulp capping and as a liner under restorative materials.

Properties

- **Low Solubility:** Ensures stability and longevity of the lining material.
- **High Compressive Strength:** Provides robust support and durability under restorative materials.

Packaging

10g Dual Syringe and Mixing Spatula

RubyDent Composite Polish Paste

Composite Polish Paste is an aluminium oxide-based polishing paste designed for the final polishing of composite restorations. This high-quality paste ensures excellent shine and provides a smooth and glossy finish, enhancing the aesthetic appeal of dental restorations.

Properties

- Excellent Shining of Restorations: Delivers a high-gloss finish, enhancing the overall appearance of composite restorations.
- Thixotropic: Exhibits thixotropic properties, ensuring smooth application and easy handling.
- Great Viscosity: Offers optimal consistency for precise and effective polishing.
- Simple Use: Designed for easy application, making the polishing process straightforward and efficient.

Packaging

2g in a Syringe

RubyDent Try-in Paste

RubyDent Try-in Paste is a glycerine-based paste gel designed for use in prosthetic works and as an oxygen barrier solution. This versatile product helps prevent the formation of an oxygen-inhibited layer on the surface of resin materials after polymerization, ensuring optimal results for dental professionals.

Properties

- Easy Application: Formulated for smooth and straightforward application.
- Water Soluble: Ensures easy removal and cleanup.
- Great Viscosity: Provides optimal consistency for effective use.

Packaging

2g in a Syringe

Ruby Pit and Fissure Sealant

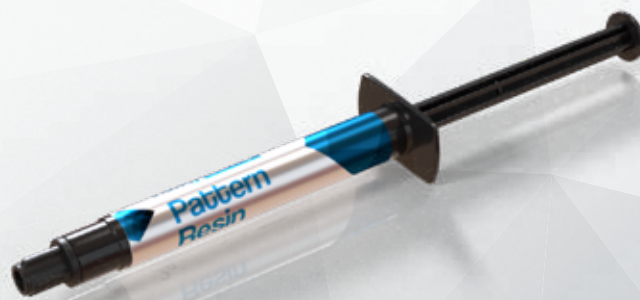

Ruby Pit and Fissure Sealant is a light-curing fluoride-releasing sealant specifically designed for occlusal surfaces. This preventive product is ideal for sealing pits and fissures to protect against cavities and other dental issues. The sealant combines ease of application with effective protection, making it an essential tool for dental professionals focused on preventive care.

Properties

- **Fluoride Releasing:** Continuously releases fluoride to help prevent cavities and strengthen enamel.
- **Radiopaque:** Easily visible on radiographs, aiding in diagnosis and treatment verification.
- **Easy Application:** Smooth consistency allows for quick and precise application.
- **Low Shrinkage:** Minimizes shrinkage during curing, ensuring a better fit and durability.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

RubyDent Pattern Resin

Pattern Resin is a light-curing, single-component resin material designed for implant transfer part fixation and modelations. This versatile resin is ideal for the production of transfer jigs, ensuring precision and stability during dental procedures.

Properties

- **Great Flowable Viscosity:** Ensures smooth application and excellent adaptation to intricate areas.
- **No Residue After Burnout:** Leaves no residual material, ensuring clean results.
- **Blue Color:** Provides clear visibility for easy application and verification.
- **High Stability:** Offers robust performance and reliable results.
- **No Breakdown:** Maintains integrity throughout the procedure.

Packaging

2g in a Syringe

RubyDent Orthodontic Adhesive

RubyDent Orthodontic Adhesive is a high-performance light-curing adhesive designed specifically for bonding of orthodontic brackets. Its superior bond strength minimizes bracket failures, while the bonding primer containing MDP monomer supports both physical and chemical adhesion, ensuring reliable and long-lasting results.

Properties

- **Easy Handling:** Formulated for smooth and convenient application.
- **Color Stability:** Maintains a consistent and aesthetic appearance over time.
- **High Bonding Strength:** Ensures robust adhesion, reducing the likelihood of bracket failures.
- **Light Curing:** Allows for precise and controlled curing, enhancing application efficiency.

Packaging

3,5g in a Syringe
Complete Kit:
1 x 3.5g in a syringe
5ml bonding primer
3ml etching gel

RubyDent Ortho Blue

RubyDent Ortho Blue is a light-cure radiopaque composite designed for anterior and posterior bite raising and orthodontic band cementation. This versatile material offers excellent consistency and ease of handling, making it an ideal choice for temporary dental disocclusion and various orthodontic applications.

Properties

- **Easy Handling:** Ensures smooth and precise application.
- **Temporary Dental Disocclusion:** Suitable for creating temporary bite raisings during orthodontic treatments.
- **Excellent Consistency:** Provides reliable performance and ease of use.

Packaging

4g in a Syringe

Ruby Temp C&B

Ruby Temp C&B is a high-quality temporary crown and bridge material designed for the fabrication of temporary and permanent crowns, bridges, inlays, and onlays. This versatile material combines optimal mechanical properties with ease of use, ensuring reliable and aesthetically pleasing temporary restorations.

Properties

- **Self-Curing:** Ensures a quick and efficient setting process, reducing chair time and improving workflow.
- **Easy to Apply, Shape, and Polish:** The material's formulation allows for smooth application, precise shaping, and a high-gloss polish.
- **Low Polymerization Shrinkage:** Minimizes shrinkage during curing, ensuring a better fit and durability.
- **Fast and Strong:** Provides temporary restoration with a robust structure, offering durability until the final restoration is placed.
- **Perfect Aesthetic Appearance:** Available in different color options to match the natural tooth color, ensuring a visually appealing temporary restoration.

Packaging

50ml cartridge + mixing tips

RubyCem Luting

RubyCem Luting is a biocompatible, radiopaque powder and liquid glass ionomer luting cement designed for the cementation of inlays, onlays, crowns, and bridges made of metal or porcelain fused to metal. This high-quality luting cement combines excellent mechanical properties with ease of use, making it an essential tool for dental professionals.

Properties

- High Fluoride Release: Continuously releases fluoride to help prevent secondary caries and strengthen enamel.
- Easy Mixing: The formulation allows for smooth and consistent mixing, ensuring precise application.

Packaging

10g Powder and 10ml Liquid and accessories

RubyCem Filling

RubyCem Filling is a biocompatible radiopaque powder and liquid glass ionomer filling cement. This advanced material is designed to provide strong, durable, and aesthetically pleasing restorations. It combines excellent mechanical properties with ease of use, making it an essential tool for dental professionals.

Properties

- Great Aesthetics: Provides visually appealing restorations that blend seamlessly with natural teeth.
- Easy Mixing: The formulation allows for smooth and consistent mixing, ensuring precise application.
- Higher Compressive Strength: Provides strong resistance to pressure and wear.

Packaging

10g Powder and 10ml Liquid and accessories

RubyGlass L

RubyGlass L is a cost-effective powder and liquid glass ionomer luting cement. This high-quality material is used for the cementation of inlays, onlays, crowns, and bridges made of metal or porcelain fused to metal. Combining excellent mechanical properties with ease of use, RubyGlass L is an essential tool for dental professionals.

Properties

- High Fluoride Release: Continuously releases fluoride to help prevent secondary caries and strengthen enamel.
- Easy Mixing: The formulation allows for smooth and consistent mixing, ensuring precise application.

Packaging

15g Powder and 10ml Liquid and accessories

RubyGlass F

RubyGlass F is a cost-effective powder and liquid glass ionomer restorative cement. It can be used as a base or liner material under restorations, providing excellent support and durability for dental procedures.

Properties

- Great Aesthetics: Offers visually appealing restorations that blend seamlessly with natural teeth.
- Higher Compressive Strength: Offers excellent resistance to pressure and wear.

Packaging

15g Powder and 10ml Liquid and accessories

MDP monomer

Ruby SE Cem

Ruby SE Cem is a self-etching and self-adhesive permanent resin cement designed for the cementation of crowns, bridges, inlays, onlays, and posts. This advanced luting material combines higher bonding strength with excellent marginal sealing, ensuring durable and reliable restorations. Its time-saving properties and high performance make it an essential tool for dental professionals.

Properties

- Self-Etching and Self-Adhesive: Simplifies the bonding process by eliminating the need for separate etching and adhesive steps.
- Higher Bonding Strength: Ensures strong and durable bonding between the tooth structure and the restoration.
- Excellent Marginal Sealing: Provides effective sealing at the margins, reducing the risk of microleakage and secondary caries.
- Time-Saving: Streamlines the luting process, saving valuable time for dental professionals.
- High Performance: Delivers reliable and consistent results for long-lasting restorations.
- MDP Monomer: Enhances bonding to both enamel and dentin.

Packaging

9g Dual Syringe and mixing tips

RubyTemp NE

RubyTemp NE is a zinc oxide non-eugenol temporary cement designed for the temporary cementation of crowns and bridges. This product is particularly suitable for patients who exhibit allergic reactions to eugenol. It comes in an dual syringe format, ensuring easy and precise application.

Properties

- Free of Eugenol: Safe for patients with eugenol allergies.
- Easy to Use: The automix syringe and mixing tips make application straightforward and convenient.
- Perfect Sealing: Ensures reliable sealing of temporary restorations.
- Low Solubility: Resistant to dissolution, providing effective temporary cementation.

Packaging

9g Dual Syringe and mixing spatula

Packaging

45g Powder and 15ml Liquid and accessories

RubyZoe Zinc Oxide Eugenol Cement

RubyZoe Zinc Oxide Eugenol Cement is a high-quality dental cement used for temporary fillings. It provides effective sealing and filling, making it an essential tool for dental professionals.

Properties

- **Temporary Filling:** Ideal for temporary restorations, providing reliable and durable performance.
- **Root Canal Sealing:** Ensures effective sealing of root canals, preventing leakage and contamination.
- **Root Canal Filling:** Suitable for filling root canals, ensuring a secure and stable restoration.
- **Radiopaque:** Easily visible on radiographs, aiding in diagnosis and treatment verification.
- **Base and Lining Material:** Can be used as a base or lining material under permanent fillings.
- **Easy to Mix:** The formulation allows for smooth and consistent mixing, ensuring precise application.

RubyZoe Eugenol

RubyZoe Eugenol is a pharmaceutical-grade eugenol solution specifically formulated for use with zinc oxide powder in temporary dental fillings. This high-quality liquid provides effective sealing and filling, making it an essential tool for dental professionals.

Properties

- **100% Eugenol (Pharma Grade):** Ensures high purity and effectiveness for dental procedures.
- **Easy to Mix:** The formulation allows for smooth and consistent mixing with zinc oxide powder.

Packaging

15ml Liquid

RubyZoe Zinc Oxide Powder

RubyZoe Zinc Oxide Powder is a high-quality zinc oxide powder used for temporary dental fillings when mixed with eugenol. This versatile powder is ideal for various dental applications, ensuring effective sealing and filling.

Properties

- **100% Zinc Oxide (Pharma Grade):** Ensures high purity and effectiveness for dental procedures.
- **Easy to Mix:** The formulation allows for smooth and consistent mixing with eugenol.

Packaging

45g Powder

Ruby Zinc P

Ruby Zinc P is a high-quality zinc phosphate cement designed for the cementation of crowns and bridges, as well as a liner material for all types of filling materials. This versatile cement combines excellent mechanical properties with ease of use, making it an essential tool for dental professionals.

Properties

- High Compressive Strength: Ensures durable and reliable performance for long-lasting restorations.
- Radiopaque: Easily visible on radiographs, aiding in diagnosis and treatment verification.
- Easy Application: The formulation allows for smooth and consistent application.
- Low Film Thickness: Minimizes the thickness of the cement layer, ensuring a better fit and adhesion of the restoration.

Packaging

45g Powder and 20 ml Liquid and accessories

Ruby Zinc Poly

Ruby Zinc Poly is a zinc polycarboxylate cement specifically formulated for the cementation of crowns, bridges, inlays, and onlays. It is also suitable for use as a base or lining under composite, amalgam, or glass-ionomer restorations, and as a temporary filling material. This versatile cement combines high adhesive strength with ease of use, making it an essential tool for dental professionals.

Properties

- High Adhesive Strength: Ensures durable and reliable bonding for long-lasting restorations.
- Contains No Phosphoric Acid: Safe for patients with sensitivities to phosphoric acid.
- Radiopaque: Easily visible on radiographs, aiding in diagnosis and treatment verification.
- Easy Mixing and Application: The formulation allows for smooth and consistent mixing, ensuring precise application.
- Low Film Thickness: Minimizes the thickness of the cement layer, ensuring a better fit and adhesion of the restoration.

Packaging

45g Powder and 15 ml Liquid and accessories

RubyShine Prophylaxis Paste

RubyShine Prophylaxis Paste is specially formulated with polishing and cleaning agents that contain nano particles, ensuring effective dental hygiene. This advanced prophylaxis paste is designed to provide thorough cleaning and polishing of teeth, making it an essential tool for dental professionals focused on maintaining optimal oral health.

Properties

- Nano Particles: Ensures enhanced cleaning and polishing, reaching even the smallest crevices.
- Flavored Options: Available in a variety of flavors including mint, strawberry, orange, and raspberry, providing a pleasant experience for patients.
- Effective Cleaning and Polishing: Provides superior cleaning and polishing results, ensuring bright and healthy smiles.

RubyHemostat

Ruby Hemostat is a 25% buffered aluminum sulfate solution used for stopping minor gingival bleeding during various dental procedures. This hemostatic liquid is particularly useful in restorative procedures, crown preparations, and the placement of bands, matrices, and before taking impressions. It is epinephrine-free, stable, and provides quick hemostasis, making it an essential tool for dental professionals.

Properties

- **Epinephrine Free:** Safe for patients who may be sensitive to epinephrine.
- **Stable:** Maintains its effectiveness over time, ensuring consistent results.
- **Quick Hemostasis:** Provides rapid control of minor bleeding, enhancing the efficiency of dental procedures.

Packaging

10ml Liquid

RubyTemp

RubyTemp is a high-quality temporary filling material designed for the proven filling and temporary insertion of permanent crowns and bridges. This versatile product ensures good marginal adaptation, making it an essential tool for dental professionals.

Properties

- **Good Marginal Adaptation:** Ensures a snug and secure fit, preventing leakage and ensuring comfort for the patient.
- **Self Curing with Action of Saliva:** Eliminates the need for mixing, simplifying the application process.
- **No Mixing Required:** The material cures with the natural action of saliva, saving time and reducing complexity.
- **Non-Eugenol:** Safe for patients with eugenol allergies, providing effective temporary restorations without causing allergic reactions.

Packaging

30g Bottle

Ruby White Office

RubyWhite Office is a professional tooth whitening system designed for use in dental offices. Utilizing a 35% hydrogen peroxide formula, this system ensures effective and rapid whitening results. It is specially formulated to provide patients with a brighter smile while minimizing sensitivity.

Properties

- 35% Hydrogen Peroxide: Ensures powerful and effective whitening results.
- Syringe Coupling System: Provides easy and precise application.
- Single Application: Delivers results with just one application per session.
- Low Sensitivity: Formulated to minimize discomfort and sensitivity during and after treatment.
- Excellent Viscosity: Ensures the gel stays in place for optimal performance.
- Easy Application: Designed for smooth and efficient use in a dental office setting.

Packaging

1 Patient Kit (1 time use of whitening system + 2g gingiva barrier)
 2 Patient Kit: (2 times use of whitening system + 2g gingiva barrier)
 10 Patient Kit (10 times of whitening system)

Ruby White Home

Product Overview: RubyWhite Home is a convenient and effective tooth whitening system designed for home use. Utilizing carbamide peroxide, this system is available in various formulations of 10%, 16%, and 22% carbamide peroxide. It ensures safe and gradual whitening, providing patients with a brighter smile without the risk of burns.

Properties

- Carbamide Peroxide-Based: Available in 10%, 16%, and 22% formulations for tailored whitening needs.
- Single Syringe Application: Provides ease of use and precise application with each treatment.
- No Risk of Burns: Designed to be gentle on the gums, ensuring a comfortable experience.
- Excellent Viscosity: Ensures the gel stays in place for optimal whitening performance.

Packaging

1 Patient Kit: Includes a single-use whitening system available in 10%, 16%, or 22% carbamide peroxide.
 4 Patient Kit: Includes four uses of the whitening system available in 10%, 16%, or 22% carbamide peroxide.

FlexDam Gingiva Barrier

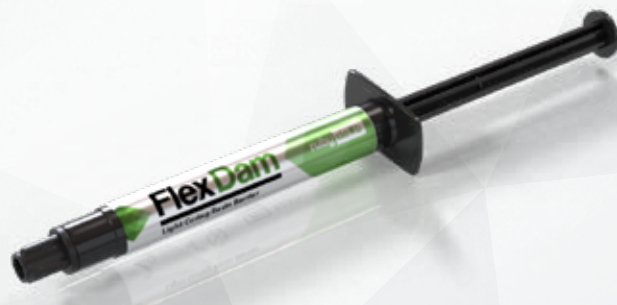

FlexDam Gingiva Barrier is a light-curing resin-based barrier designed to protect soft tissue during dental procedures. This barrier ensures minimal heat and soft tissue sensitivity during curing, providing a comfortable experience for patients.

Properties

- Easily Removable After Treatment: Ensures convenient removal post-procedure.
- Minimizes Heat and Soft Tissue Sensitivity During Curing: Provides comfort and safety for patients.
- Blue Shade: Enhances visibility and application accuracy.
- 5 Second Curing: Allows for quick and efficient use.

Packaging

2g syringe
2g syringe x 2
2g syringe x 4

Rubydent Tray Sheets

Rubydent Tray Sheets are designed to create custom-made whitening trays and night guards for patients undergoing home use whitening treatments. Available in both soft and hard options, these tray sheets offer versatility and high performance. They are made from high-quality thermoplastic materials, ensuring durability and ease of use.

Properties

- High Quality Thermoplastic Materials: Provides durability and reliability for various applications.
- Suitable for Different Applications: Ideal for creating custom whitening trays and night guards.
- Easy Trimming: Facilitates smooth and precise customization to fit patients' needs.
- Available Options: Soft and hard options available in different thicknesses (1.00 mm, 2.00 mm, and 3.00 mm)

Packaging

Soft Options:
1 mm – 30 pcs per box
2 mm – 20 pcs per box
3 mm – 12 pcs per box

Hard Options:
1 mm – 30 pcs per box
2 mm – 20 pcs per box
3 mm – 12 pcs per box

RubyCap Capsule Amalgam

RubyCap Capsule Amalgam is a high copper alloy amalgam that contains a mixture of spherical and irregular particles. This advanced amalgam is pre-dosed in self-activating capsules and is designed to provide firm condensation and smooth carving, making it an essential tool for dental professionals.

Properties

- High Copper Alloy: Provides strong and durable restorations.
- High Affinity with Mercury: Ensures optimal amalgamation for reliable performance.
- Smooth Carving: Allows for precise and smooth carving, enhancing the final restoration's aesthetics.
- Non-Gamma II: Eliminates the risk of Gamma II phase, improving the material's performance and longevity.

Composition: 45% Ag – 30.5% Sn – 24% Cu – 0.5% Zn

Packaging

50 Capsules in a Jar

RubyCap NG Capsule Amalgam

RubyCap NG Capsule Amalgam is a high copper alloy that contains a mixture of spherical and irregular particles. This advanced amalgam has a higher silver content (55% Ag) than RubyCap and is pre-dosed in self-activating capsules, ensuring ease of use and reliable performance. Its unique composition and features make it an essential tool for dental professionals focused on delivering durable and high-quality restorations.

Properties

- High Silver/High Copper Alloy: Provides strong and durable restorations.
- High Affinity with Mercury: Ensures optimal amalgamation for reliable performance.
- Smooth Carving: Allows for precise and smooth carving, enhancing the final restoration's aesthetics.
- Non-Gamma II: Eliminates the risk of Gamma II phase, improving the material's performance and longevity.

Composition: 55% Ag – 29% Sn – 15.8% Cu – 0.2% Zn

Packaging

50 Capsules in a Jar

RubyCap High Capsule Amalgam

RubyCap High Capsule Amalgam is a high silver alloy that contains a mixture of spherical and irregular particles. This advanced amalgam is pre-dosed in self-activating capsules, ensuring ease of use and reliable performance. Its unique composition and features make it an essential tool for dental professionals focused on delivering durable and high-quality restorations.

Properties

- High Silver Content: Provides strong and durable restorations.
- Non-Gamma II: Eliminates the risk of Gamma II phase, improving the material's performance and longevity.
- Exceptionally Durable: Ensures long-lasting performance.

Composition: 69.2% Ag – 18.6% Sn – 11.9% Cu – 0.3% Zn

Packaging

50 Capsules in a Jar

Technical Properties

A well balanced alloy for quality fillings;
 Spill 1 – 400 mg Alloy / 360 mg Mercury
 Spill 2 – 600 mg Alloy / 540 mg Mercury
 Spill 3 – 800 mg Alloy / 720 mg Mercury
 Spill 5 – 1200 mg Alloy / 1080 mg Mercury
 Working Time: 4 minutes
 Carving & burnishing: 5 – 9 minutes
 Conforms to:
 ISO 20749 Pre-capsulated Dental Amalgam
 Compressive Strength;
 1h < 397 MPa
 24h < 437 MPa
 Creep : %0,99
 Dimensional Change During Hardening : %0,01

**RubyGam Powder Amalgam**

RubyGam Powder Amalgam is a high copper alloy that contains a mixture of spherical and irregular particles. This advanced amalgam ensures optimal amalgamation, firm condensation, and smooth carving, making it an essential tool for dental professionals focused on delivering durable and high-quality restorations.

Properties

- High Affinity with Mercury: Ensures optimal amalgamation for reliable performance.
- Smooth Carving: Allows for precise and smooth carving, enhancing the final restoration's aesthetics.
- Non-Gamma II: Eliminates the risk of Gamma II phase, improving the material's performance and longevity.

Composition: 45% Ag – 30.5% Sn – 24% Cu – 0.5% Zn

Packaging

30g Powder

RubyPlaton Polishing Discs

RubyPlaton Polishing Discs are high-quality dental polishing discs designed for various levels of finishing and polishing procedures. These versatile discs come in different colors, each representing a specific level of coarseness and purpose, ensuring precise and efficient results in dental practices.

Properties

14 mm Size: Suitable for a range of dental applications.

Color-Coded for Different Uses:

- **White** – Extra Fine for Polishing
- **Yellow** – Fine for Finishing
- **Green** – Medium for Countoring
- **Blue** – Coarse for Gross Reduction
- **Brown** – X Coarse for Gross Reduction
- **Pink** – XX Coarse for Gross Reduction

Packaging

10 pcs discs and 1 mandren in a pack

40 pcs discs and 1 mandren in a plastic box

80 pcs discs and 1 mandren in a plastic box

240 pcs discs and 4 mandrens in a plastic box

RubyPlaton Polishing Strips

RubyPlaton Polishing Strips feature different types of strips with various grit sizes, combining two distinct types of grits to ensure excellent polishing results. These flexible and easy-to-use strips are designed for achieving precise and efficient dental polishing.

Properties

Different Grit Sizes: Each strip combines two types of grits to provide optimal polishing results.

Flexible and Easy to Use: Ensures ease of use and adaptability to various dental procedures.

- **White** – Extra Fine for Polishing
- **Yellow** – Fine for Finishing
- **Green** – Medium for Countoring
- **Blue** – Coarse for Gross Reduction

Packaging

75 pcs Strips in a Plastic Box

80 pcs Discs and 1 Mandren

+ 75 pcs Strips in a Plastic Box

240 pcs Discs and 4 Mandren

+ 75 pcs Strips in a Plastic Box

6m Strips band

RubyPlaton Stainless Steel Abrasive Strips

RubyPlaton Stainless Steel Abrasive Strips are designed for the precise finishing and polishing of restorative materials. These high-quality strips can be used with composites, acrylics, glass ionomers, and amalgam, ensuring optimal results and enhancing the longevity of dental restorations.

Properties

- Great Polishability: Provides an excellent finish, enhancing the aesthetic and functional properties of restorative materials.
- Promotes Abrasion: Ensures effective removal of excess material and smoothens surfaces.
- Available Sizes: Comes in two different sizes, 4.00 mm and 6.00 mm, catering to various needs and applications.

Packaging

12 pcs of 4 mm per Box
12 pcs of 6 mm per Box

RubyPlaton Wooden Wedges

RubyPlaton Wooden Wedges feature an anatomical form that ensures excellent fillings for dental procedures. These versatile wedges are color-coded based on their size and properties, allowing for easy identification and use.

Properties

- Superthin Short (White)
- Thin Short (Yellow)
- Thin Long (Blue)
- Medium Short (Pink)
- Medium Long (Green)

Packaging

100 pcs Wedges in a Plastic Box

RubyPlaton Polisher

RubyPlaton Polisher are expertly designed for the efficient finishing and polishing of composite restorations. These high-quality polishing cups ensure a smooth and glossy finish, enhancing the appearance and longevity of dental restorations.

Properties

- Ease of Mounting: Can be easily mounted to the mandrel, facilitating quick and hassle-free setup.
- Autoclavable: Suitable for sterilization, ensuring hygiene and reusability.
- Excellent Polishing: Provides exceptional polishing performance for a brilliant finish.

Packaging

10 pcs in a bag

RubyPlaton Transparent Wedges

RubyPlaton Transparent Wedges are specially formed by a transparent polymer for excellent filling during dental procedures. These wedges ensure reliable performance and ease of use, making them an essential tool for dental professionals focused on achieving precise and effective results.

Properties

- Not Easy to Break: Long-lived with high quality and durability.
- Easy to Use: Designed for straightforward application and removal.
- Anatomic Form: Provides optimal fit and support during dental procedures.

Packaging

100 pcs in a Plastic Box

RubyMark Articulating Paper Straight

RubyMark Articulating Paper Straight is high-quality articulating paper used in dental procedures to check occlusal contacts and ensure accurate bite adjustments.

Properties

- Non-Sticky: Ensures easy removal without leaving any residue.
- Smooth Surface: Provides clear and precise markings for accurate occlusal adjustments.
- Double Sided Options: Available in both blue and red colors to suit different needs and preferences.

Packaging

40µ – Blue/Red Straight (144 pcs)
80µ – Blue/Red Straight (72 pcs)

RubyMark Articulating Paper Horseshoe

RubyMark Articulating Paper Horseshoe is a high-quality articulating paper used in dental procedures to check occlusal contacts and ensure accurate bite adjustments. This product is designed in a horseshoe form and has a thickness of 80µ, making it suitable for precise and sensitive occlusal marking.

Properties

- **Non-Sticky:** Ensures easy removal without leaving any residue.
- **Smooth Surface:** Provides clear and precise markings for accurate occlusal adjustments.
- **Double Sided Options:** Available in both blue and red colors to suit different needs and preferences.

Packaging

80µ – Blue/Red Horseshoe (72 pcs)

RubyMark Articulating Paper 200 Micron Straight

RubyMark Articulating Paper 200 Micron Straight is a high-quality, sensitive articulating paper designed for simple and accurate marking in dental procedures. This special fleece paper is available in blue and red colors, ensuring clear and precise occlusal contact markings.

Properties

- **Non-Sticky:** Ensures easy removal without leaving any residue.
- **Smooth Surface:** Provides clear and precise markings for accurate occlusal adjustments.
- **Most Accurate Occlusion:** Offers the most accurate occlusal contact markings for precise bite adjustments.

Packaging

200µ – Blue Straight 300 pcs. Paper
 200µ – Red Straight 300 pcs. Paper
 200µ – Blue Straight 150 pcs. Paper / Red Straight 150 pcs. Paper

SOFT START

Rubydent Curing Light

Rubydent Curing Light is a high-quality dental curing light device designed to offer effective and quality curing performance. With an ergonomic design and a stainless steel head, this device ensures ease of use and reliable results for dental professionals.

Properties

- 2 mm Resin Curing in 1 Second: Provides quick and efficient curing of dental resins.
- Long-Life Battery: Over 1300 cycles under 10-second mode, ensuring extended use without frequent recharging.
- Stainless Steel Head: Durable and robust, designed for long-term performance.
- Replaceable and 360-Degree Rotating Head: Offers flexibility and convenience during dental procedures.
- Ergonomic Design: Ensures comfortable use, reducing hand fatigue during prolonged use.
- Color Options: Available in black or white to suit different preferences.

Technical Specifications:

Input: 100-240VAC 50Hz/60Hz
 Output: 5V DC/1A
 Wave Length: 385nm-515nm
 Light Intensity: 1000mW/cm² – 2500mW/cm²
 Battery: 2600mA

RubyDent Dental Dam

The Dental Dam is a high-quality isolation product made from natural rubber latex. It is designed to provide effective isolation of entire operatory areas during dental procedures. This durable rubber dam offers great tear resistance and high elongation, ensuring reliable performance and ease of use.

Properties

- Color Contrast with Soft Tissue: Enhances visibility and provides a clear working field.
- Low Powder: Ensures minimal residue and ease of handling.
- Great Tear Resistance: Offers durability and reliability during use.
- High Elongation: Provides flexibility and adaptability to various dental procedures.
- Color Options: Available in Blue, Green, Pink, Black, and Silk Blue to suit different preferences.
- Size: 15cm x 15cm (6"x6")

RubyAlgin

RubyAlgin is a cost-effective chromatic alginate impression material designed for detailed and high precision dental impressions. This advanced material ensures reliable performance and ease of use, making it an essential tool for dental professionals focused on achieving accurate and detailed impressions.

Properties

- Chromatic Phase: Changes color from white to pink, indicating different stages of the setting process.
- Easy Mixing: Facilitates smooth and consistent mixing.
- Homogenous and Smooth Use: Ensures uniform consistency and application.
- Dust-Free: Minimizes dust during handling and mixing.
- Long Dimensional Stability: Maintains accuracy and stability over time.

Packaging

450g Bag

AlginArt

AlginArt is a high-quality chromatic alginate impression material by RubyDent, designed for very detailed and high precision dental impressions. This advanced material ensures reliable performance and ease of use, making it an essential tool for dental professionals focused on achieving accurate and detailed impressions.

Properties

- Chromatic Phase: Changes color from purple to pink to yellow, indicating different stages of the setting process.
- Easy Mixing: Facilitates smooth and consistent mixing.
- Homogenous and Smooth Use: Ensures uniform consistency and application.
- Dust-Free: Minimizes dust during handling and mixing.
- Long Dimensional Stability: Maintains accuracy and stability over time.
- Mint Flavour: Provides a pleasant taste for patients during the impression process.
- Excellent Accuracy: Achieves an accuracy of 20 microns, ensuring detailed and precise impressions.

SilArt C Silicone

SilArt C Silicone is a condensation silicone (Type C) impression material designed for high precision and accurate measurements. It is particularly useful for capturing the finest details in fixed and removable prostheses, bridges, crowns, inlays, and onlays, ensuring reliable and precise results for dental professionals.

Properties

- **Initially High Fluidity:** Facilitates easy mixing and shaping.
- **Good Visibility:** Ensures clear and accurate impressions.
- **High Measurement Accuracy and Precision:** Provides detailed and reliable impressions.
- **High Tear Resistance:** Ensures durability and resistance to tearing during removal.
- **Optimum Hardness:** Maintains stability and accuracy in the impressions.

Packaging

Putty – 900ml
Light Body – 140ml
Catalyst – 60ml

SilArt A Silicone

SilArt A Silicone is a specially formulated addition silicone used for both two-step putty/wash and one-step putty/wash techniques. It is a type A silicone sealant with high precision for impression taking, suitable for bridges, crowns, inlays, and onlays.

Properties

- **Easy Mixing and Shaping:** Facilitates easy mixing and application.
- **High Hydrophilicity:** Ensures better flow and detailed reproduction in a moist environment.
- **Thixotropic:** Prevents dripping and ensures accurate impression taking.
- **High Measurement Accuracy and Precision:** Provides detailed and reliable impressions.
- **Tear Resistant:** Ensures durability and resistance to tearing during removal.

Packaging

400g Base and 400g Catalyst
Light Body 50 ml cartridge

RubyDent Air/Water Syringe Tips

RubyDent Air/Water Syringe Tips are multi-colored disposable tips designed for dental operations. These single-use tips help to minimize cross-contamination, making them an essential tool for maintaining hygiene in dental practices.

Properties

- Rigid Plastic Material: Ensures durability and reliable performance during procedures.
- Multi-Color Pack: Provides different colors in one pack for easy identification and organization.
- Eliminates Sterilization Time: Disposable design reduces the need for sterilization, saving time and effort.
- Easy to Insert & Remove: Designed for quick and hassle-free attachment and removal from the syringe.

Packaging

250 pcs per Bag

RubyDent Micro Applicators

RubyDent Micro Applicators are disposable microbrush applicators designed for the precise application of small amounts of dental materials. These applicators are convenient and essential tools for various dental procedures, ensuring accurate and controlled placement.

Properties

- Flexible Tips: The tips can be bent to any angle, providing easy access to hard-to-reach areas.
- Size Options: Available in regular (2.5 mm diameter) and fine (2.0 mm diameter) options to cater to different application needs.
- Disposable: Ensures hygiene and reduces the risk of cross-contamination.

RubyPlaton Cotton Roll

RubyPlaton Cotton Roll is a high-quality cotton roll made from 100% cotton. These rolls are designed to provide effective retraction and absorbency during dental procedures, ensuring comfort and convenience for both dental professionals and patients.

Properties

- Retracts Cheek Effectively: Ensures clear visibility and accessibility during procedures.
- Non-Linting: Maintains cleanliness and avoids leaving fibers behind.
- Does Not Adhere to Mucous Membrane: Provides ease of use and removal without discomfort.
- Highly Absorbent: Ensures optimal moisture control and management.
- Maintains Shape When Wet: Retains its form for consistent performance during procedures.
- Size: 4 x 1 cm

Packaging

No: 1 / 500 Pieces Bag
No: 2 / 500 Pieces Bag
No: 3 / 500 Pieces Bag

RubyCrownRemover

RubyCrown Remover is a practical dental tool designed for the easy and efficient removal of dental crowns. It utilizes an impact method with an arc to effectively remove crowns, making it an essential tool for dental professionals.

Properties

- Sterilizable at 134°C: Ensures high standards of hygiene and safety.
- Three Types of Remover Tips: Offers versatility and adaptability for different procedures.
- Various Types of Impact: Provides options for different levels of impact, ensuring precision and control.

Compac Zahn PMMA Block

Compac Zahn PMMA Block is a high-quality material designed for use in CAD-CAM works, particularly for creating temporary crowns and bridges. Made from premium raw materials, this block ensures durability, precision, and aesthetic appeal in dental restorations.

Properties

- **High Wear Resistance:** Ensures longevity and durability of the dental restorations.
- **High Stability:** Provides consistent and reliable performance.
- **High Detail in Milling:** Allows for precise and intricate designs, ensuring excellent fit and aesthetics.
- **High Light Transmittance:** Provides a natural appearance, closely mimicking the translucency of natural teeth.

Panacryl Acrylic Denture Base Materials

Panacryl Acrylic Denture Base Materials are high-quality prosthesis materials used for creating total and partial dental prostheses. These materials are available in two types: heat-cure acrylic and self-cure acrylic, each designed for specific dental applications.

Properties

- **Heat Cure Acrylic:** Polymerized with heat-based methylmethacrylate, this type is used for making total and partial dental prostheses.
- **Self Cure Acrylic:** Also known as cold cure acrylic, it is used for the repair of full and partial dentures.
- **Veined and Non-Veined Options:** Provides aesthetic versatility to match the natural appearance of teeth.
- **Top Quality Raw Material:** Ensures durability and reliability.
- **Smooth Surface and Easy to Polish:** Offers ease of use and excellent finish.
